BX-970 Touch Screen Display

User Interface Option for BAM-1020

Met One Instruments, Inc.

Classic BAM-1020 functionality. Easier and simpler to use.

The BX-970 option consists of a new high-visibility touch screen PC module built into a redesigned BAM-1020 front door assembly. All of the existing functionality of the BAM-1020 is retained in a more modern, logical, and intuitive format for easier menu navigation.
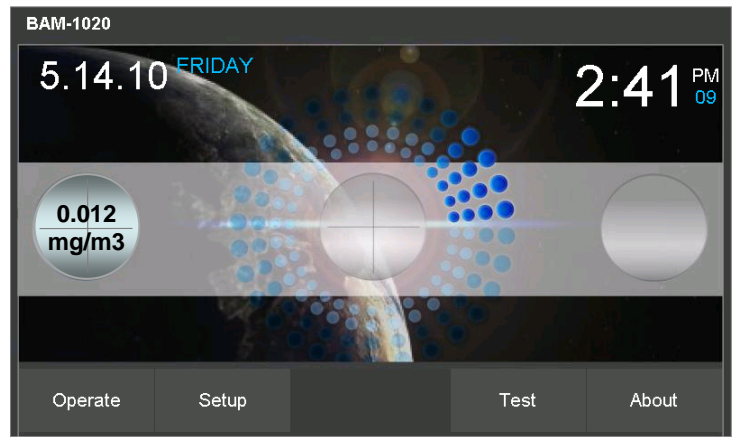

A true USB peripheral port is included in the door assembly. This allows a USB flash drive to be used for BAM-1020 data collection.

All of the FEM designated firmware functions for PM_{10}, $PM_{2.5}$ and $PM_{10-2.5}$ monitoring are supported with the BX-970 option. The Report Processor back panel is also automatically included with the touch screen option.
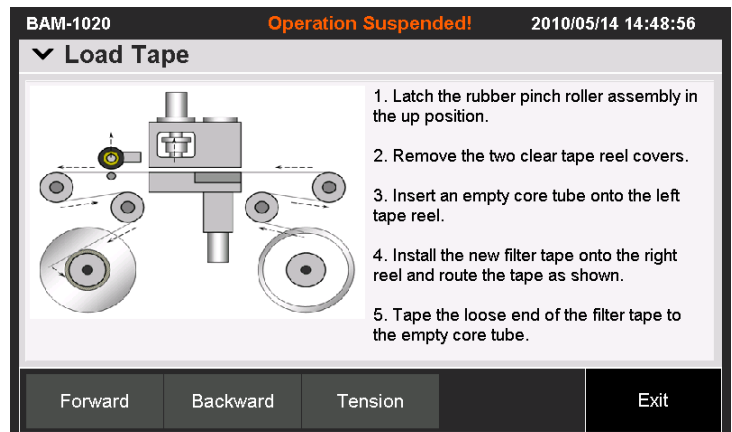

- The BX-970 option is available on new BAM-1020 units, and can be retrofitted onto many existing units as a factory upgrade. Contact Met One for details.

- The excellence of the existing BAM 1020 measurement system has been maintained.

- All of the existing BAM-1020 specifications remain the same.

- The standard classic BAM-1020 display/keypad assembly continues to be available and fully supported.
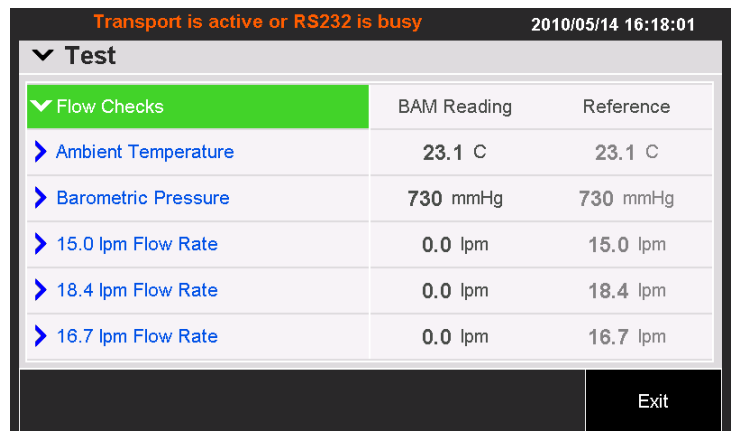

Recommended Applications

The BX-970 option is recommended for locations where the basic BAM-1020 display is difficult to see, and for users who frequently navigate the menu system to change or adjust operational settings.
